

# Surveying Application

*Capture the moment.*

## Surveying Application

- - - - X

Surveying application is used to collect data from an application that contains the geo-location along with the image and labels, is initially made for collecting dataset for different buildings in ned but it can be used for many other purposes. Like for example, Datasets for collecting the data for the vehicles, trees, buildings, flowers etc.

- The dataset can be further used in machine learning algorithms to utilize and make some useful applications.
  - it uses geo-location based information with every single image that is captured by the application.
  - It uses the labels according to that labels you can capture the images accordingly.
-

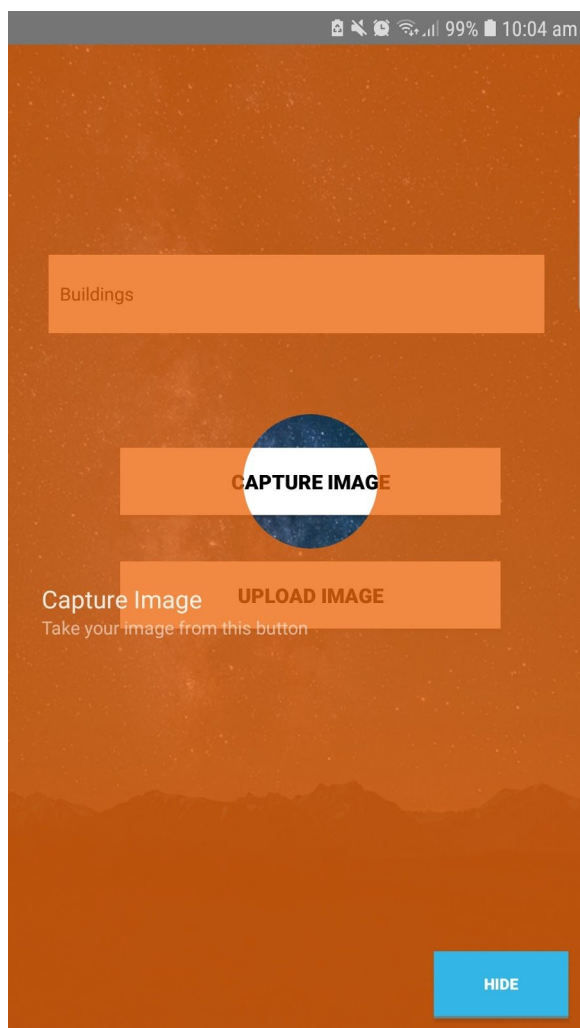

## Splash Screen.

-----X

This is the splash screen of an application. The logo is been designed by our own using the canva application.

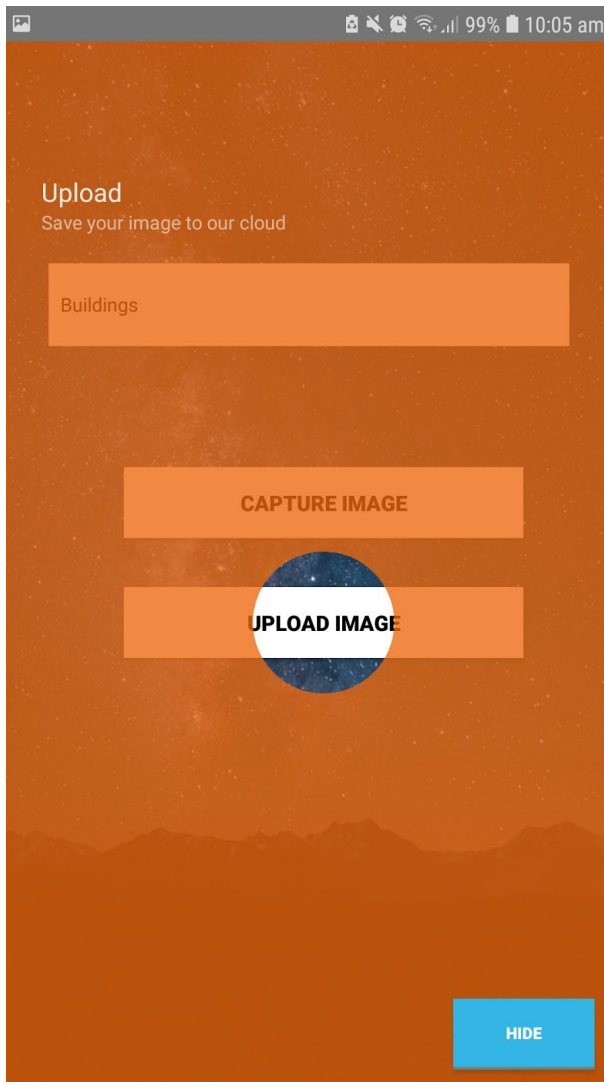

---

## Capturing Image.

- - - - X

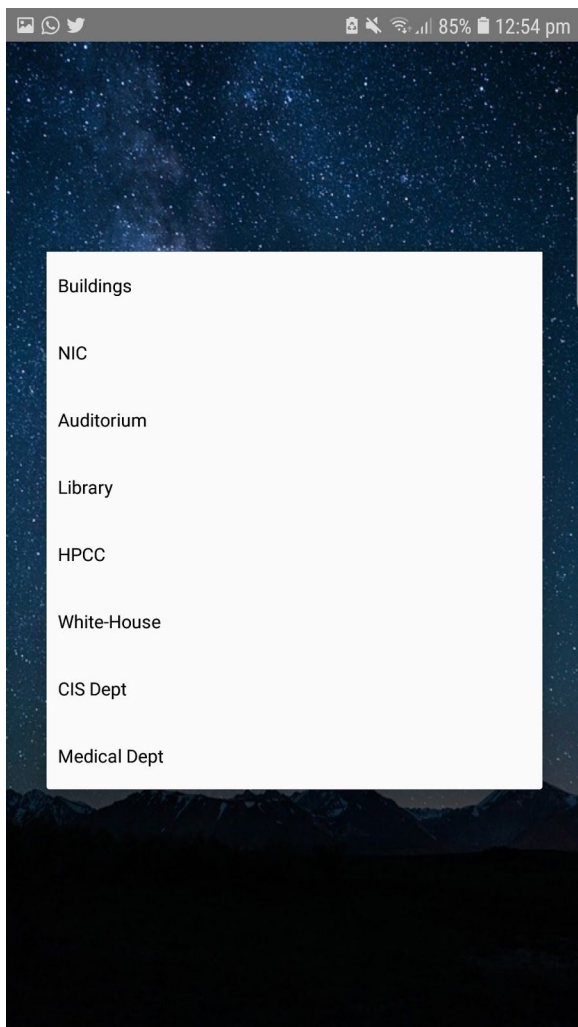

The application has an option for capturing the image it will guide you thoroughly.

## Upload Image.

- - - - X

After capturing an image there will be the option for uploading the image.

labelling.

- - - - x

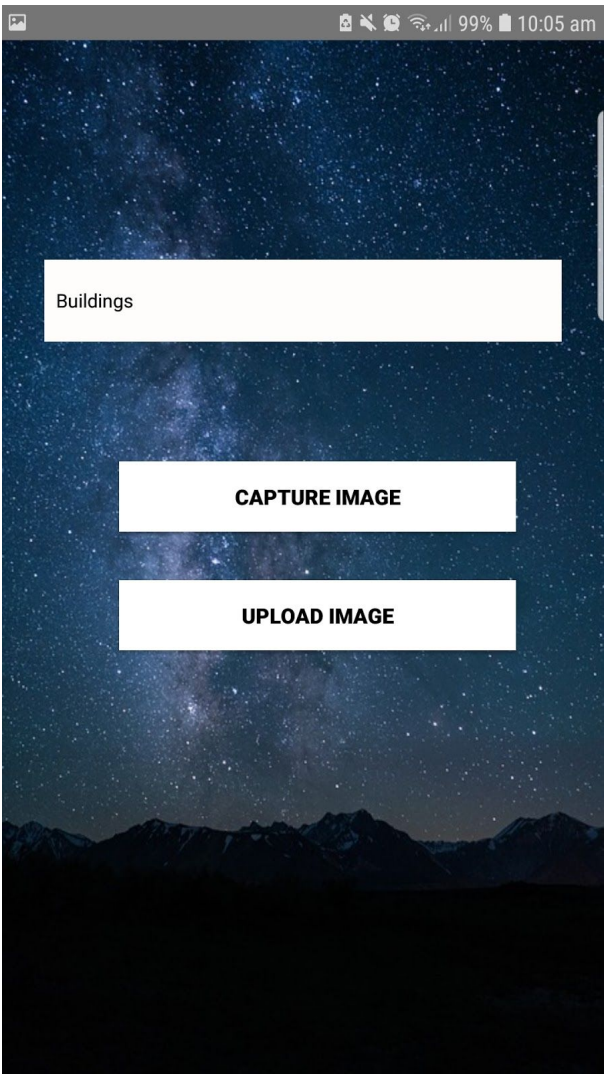

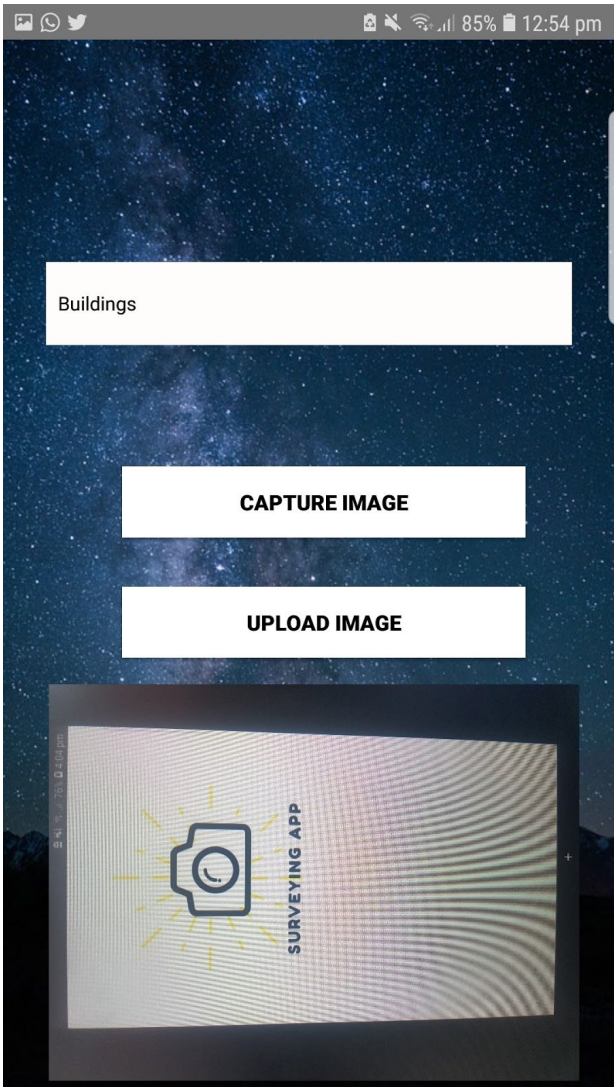

There is an option for labelling that can be select from the drop-down.

---

Glimpses.
